Juniper Cafe - Weekly operations briefing

Scope and data quality

This batch contains **12 messages representing 11 unique visits**. Python merged **1 repeated message(s)** before any counts were calculated. The comments are a convenience sample: there is no complete customer count, sales volume, staffing record, or response-rate context, so the findings describe this batch only.

What the comments say

- **Speed and queues: 4/11 visits.** Evidence: [F01/V01] [F06/V06] [F09/V09] [F10/V10]
- **Service and friendliness: 4/11 visits.** Evidence: [F02/V02] [F03/F07/V03] [F04/V04] [F09/V09]
- **Product quality and ambience: 4/11 visits.** Evidence: [F01/V01] [F04/V04] [F08/V08] [F12/V12]
- **Cleanliness and seating: 2/11 visits.** Evidence: [F02/V02] [F04/V04]
- **Availability and dietary options: 2/11 visits.** Evidence: [F05/V05] [F08/V08]
- **Pricing and payment: 1/11 visits.** Evidence: [F03/F07/V03]
- **Order-ahead and collection: 1/11 visits.** Evidence: [F10/V10]
- **Receipts: 1/11 visits.** Evidence: [F12/V12]
- **Unclear or little usable detail: 1/11 visits.** Evidence: [F11/V11]

Branch context

- **Central: 5/11 visits in this batch.** Evidence: [F01/V01] [F02/V02] [F05/V05] [F09/V09] [F11/V11]
- **Riverside: 4/11 visits in this batch.** Evidence: [F04/V04] [F08/V08] [F10/V10] [F12/V12]
- **Station: 2/11 visits in this batch.** Evidence: [F03/F07/V03] [F06/V06]

Interpretation for manager review

- Mixed comments should not be flattened into one sentiment: several visits pair praise with a problem. Evidence: [F01/V01] [F02/V02] [F03/F07/V03] [F12/V12]
- One or more comments contain too little detail to support an operational diagnosis; they are retained rather than guessed. Evidence: [F11/V11]
- **Interpretation, not a causal claim:** Speed and queues is the most frequently tagged theme in this batch (4/11); this prioritises a question to investigate, not a conclusion about all customers. Evidence: [F01/V01] [F06/V06] [F09/V09] [F10/V10]

Recommended investigation (exactly one)

For one week, record **actual wait time from joining the queue or placing an order to hand-off**, in 30-minute intervals at each branch, separating walk-in and order-ahead visits. Compare the distribution with the wait-related comments, then let the manager decide whether a small process test is warranted. Evidence motivating the investigation: [F01/V01] [F06/V06] [F09/V09] [F10/V10]

Extra data required: timestamped queue-entry/order and hand-off times, branch, channel (walk-in or order-ahead), 30-minute customer/order volume, scheduled staffing by role, and any unusual disruption. These data are needed to test timing and workload patterns; the comments alone do not establish a cause.

Human decision

A manager should inspect the cited comments, confirm that the theme labels are reasonable, review the operational feasibility of the investigation, and decide whether to act.
